Word File with composition whenever possible (anything but vehicle)
All vehicles are in the dll documentation Truck FuelDrivenCar ElectricityDrivenBike
Wheel ElectricalBat ElectricityDrivenCar **FuelDrivenBike** Wheel FuelTa Garage? The garage does not hold the vehicle's details. GarageLogi It is the vehicle's responsibility. Nonetheless, it is the ConsoleUI's role to format the ToString. It is possible that there will be a couple of ToStrings versions such as "FuelDrivenToString" or "CarToString" according to demands. **eCarStatus** GarageLogic uses the dictionary ds No logical/syntax validator, use exceptions instead, it is the

ConsoleUI's

responsibility to catch those exceptions .
